INCOMPLETE LOCK OUT BREAKER

1. Push “off” button to open breaker

2. Ring left in extended position – leaving re-engagement function active (normal position during operation)

3. Lock placed through extended ring which does NOT lock out the re-engagement function (misleading worker to think breaker is locked out)

COMPLETE LOCK OUT BREAKER

1. Push “off” button to open breaker

2. Push in middle ring to ensure lock out of re-engagement function

3. Pass lock or clip through all three rings to lock out re-engagement function
